

Information-geometric OMT methods in data analysis

April 19 2019

Feature network EMD for clustering

KEGG p53 signaling network

Wasserstein 1-metric distinguishes between near and far activity with respect to a network topology

Feature network EMD for clustering

Global spectral analysis

$$W_{ij} = \exp \left(-\frac{d^2(s_i, s_j)}{\varepsilon} \right)$$

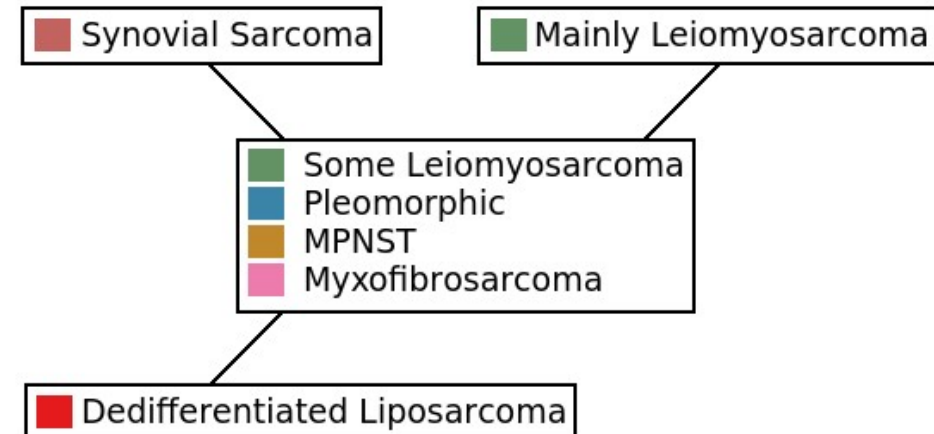

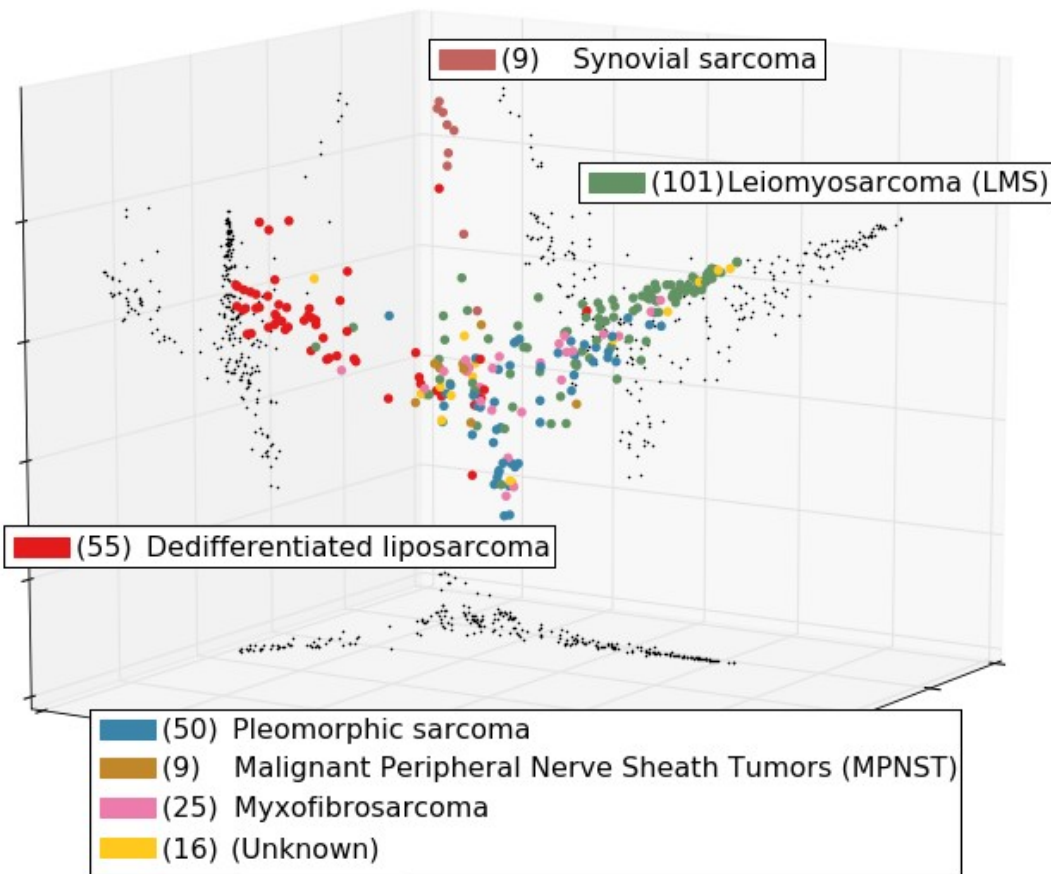

$$L = I - \tilde{D}^{-1} \tilde{W}$$

Eigenvectors

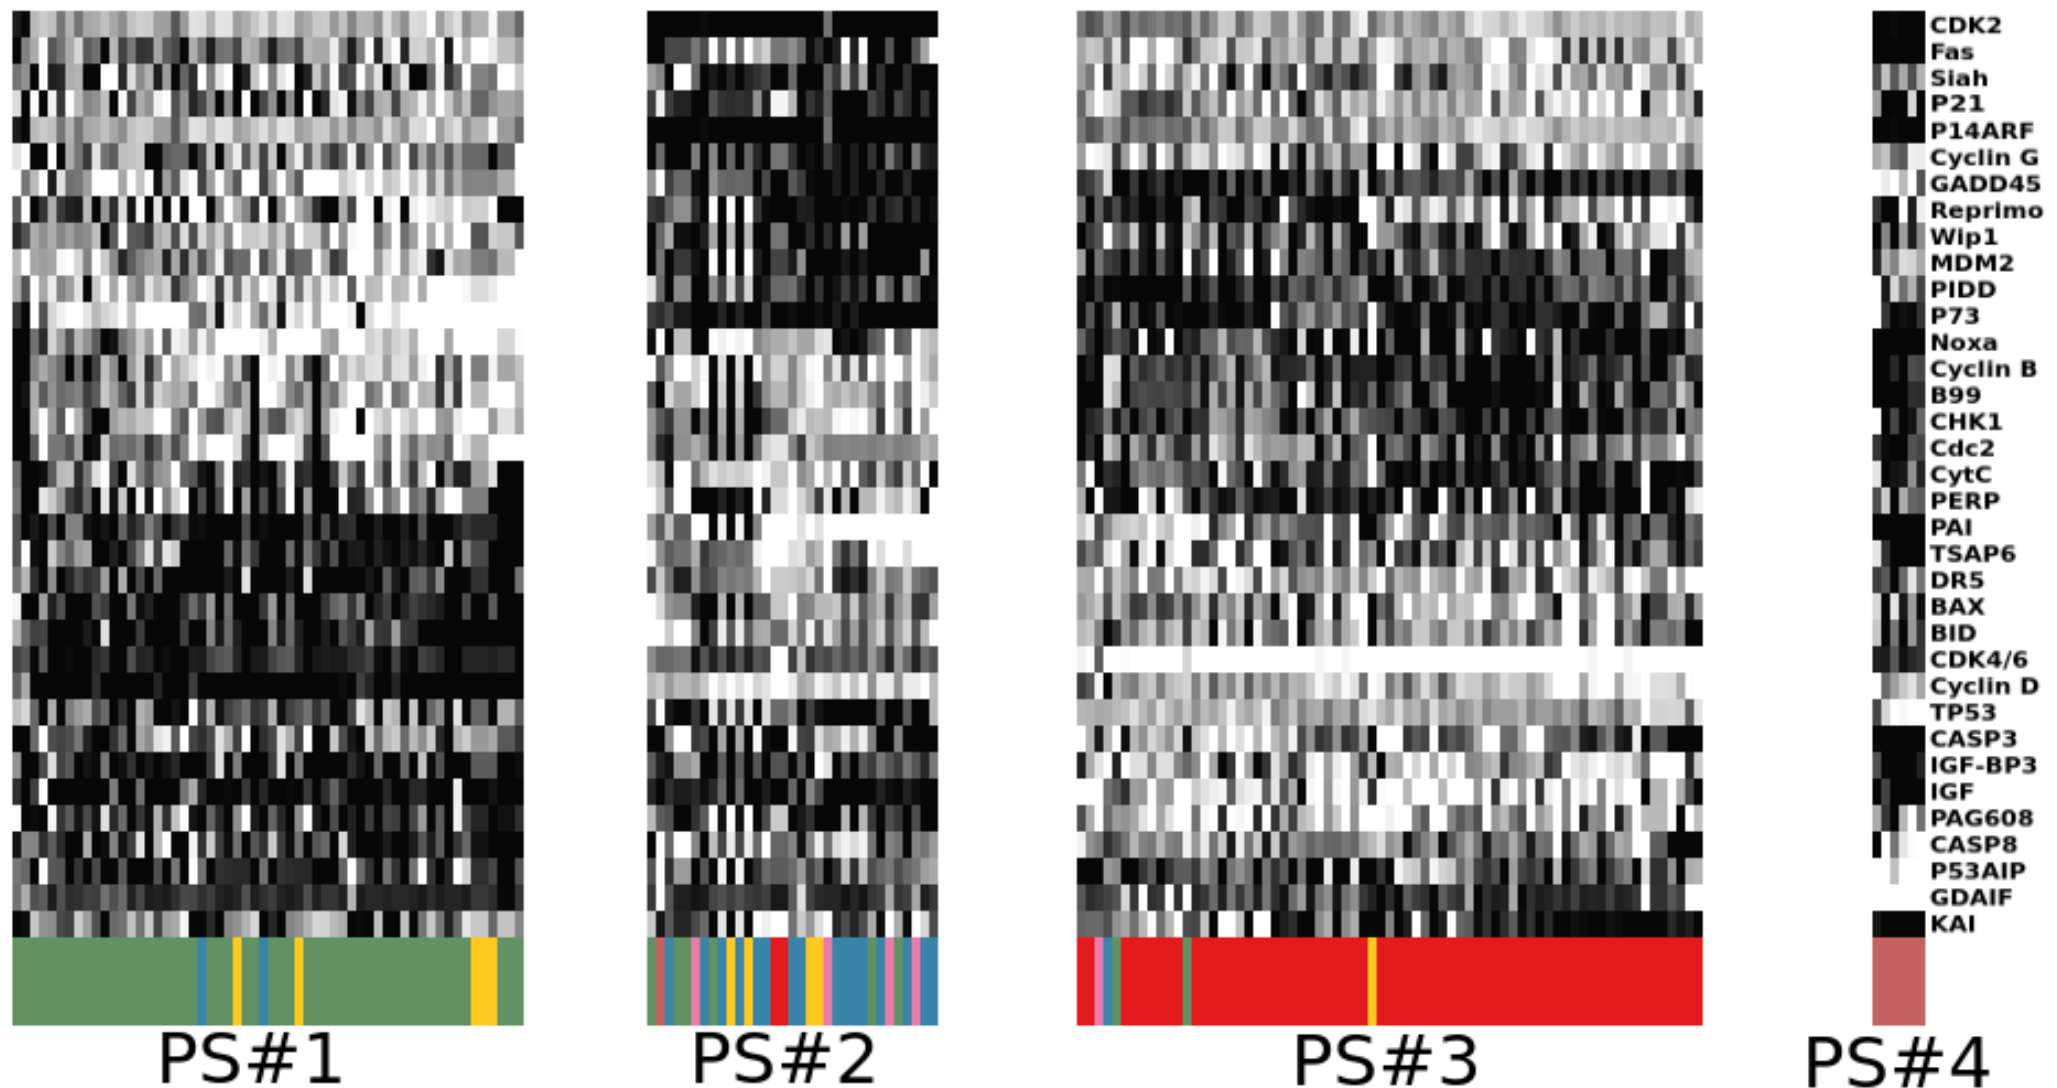

Feature network EMD for clustering

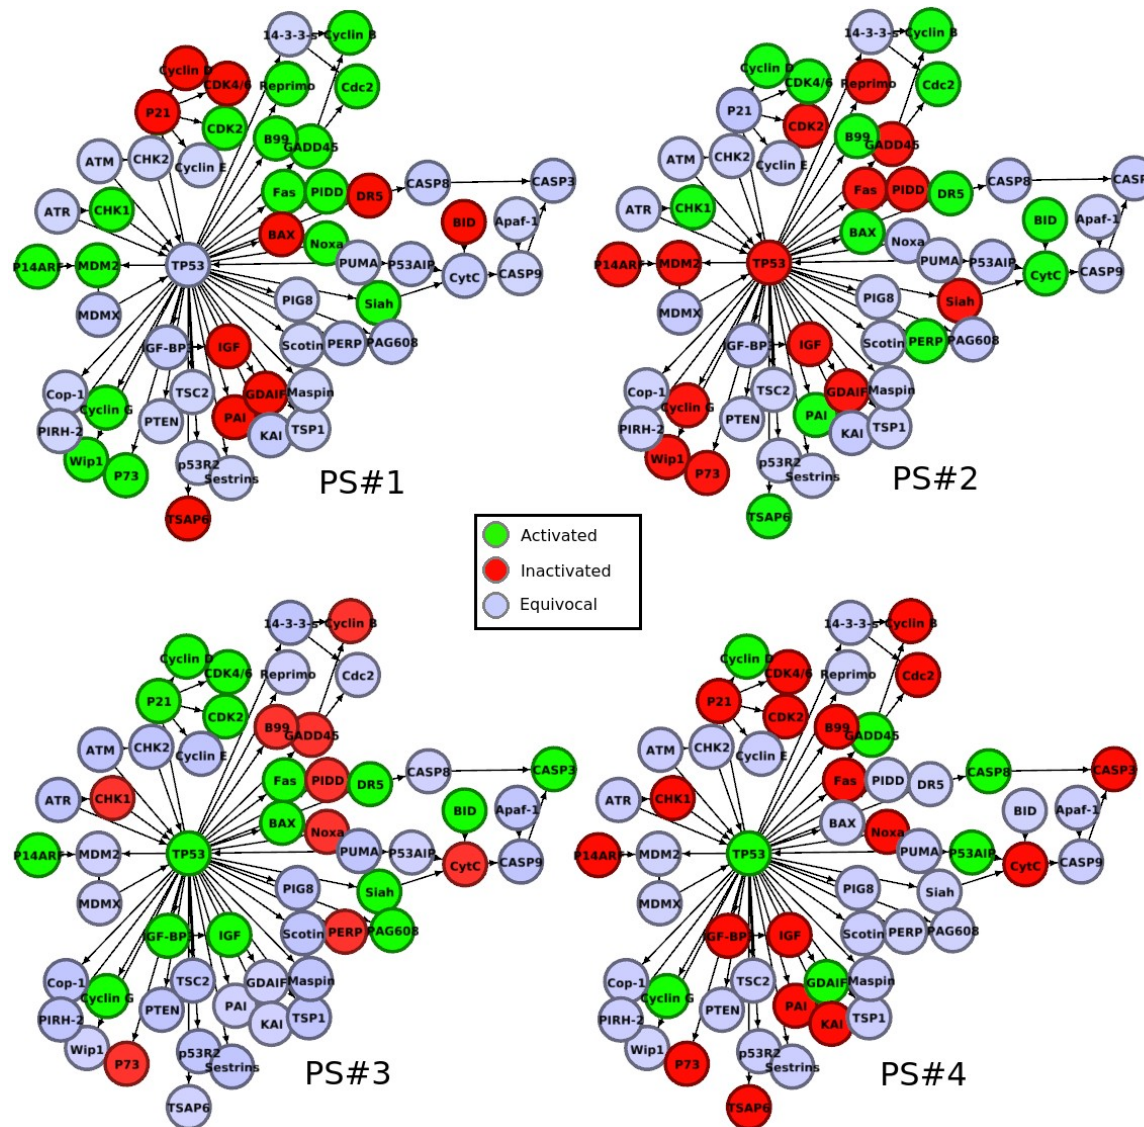

TCGA Sarcoma

Feature network EMD for clustering

Feature network EMD for clustering

OMT on GMMs of joint distributions

Network simplification with supernodes
